## MATURATION BAGS

We fully appreciate the value of the contents of a maturation bag. We have therefore chosen the company very carefully to work with on these products. The company is Jayshri Propack, an Indian manufacturer with state of the art factory and production facilities, producing a very high quality pouch. Teaming up with Pack 4 Limited to hold consignment roll stock and with the BRC approved capabilities of making emergency stock, should there be any hold up of products from India.

### Tubular Flat H B Maturation Bags

We can supply flat pouches from tubular film in a variety of substrates and in sizes to meet your production requirements.

### K-Seal H B Maturation Bags

As above, the k-seal pouch is available in the gauge that suits you best. From co-extruded material with a very high barrier and with no lamination required, prices can be very competitive.

### Barrier Shrink Maturation Bags

For customers preferring the shrink rather than vacuum process for maturing your cheese, we have two European suppliers of high quality bags in full barrier and breathable versions.

### **Valved Maturation Bags**

For any customers suffering gassing cheese (especially an issue in low or half fat cheese) we have placed a “one way” valve into maturation bags to allow the gas to escape and stop the bag blowing and spoiling the cheese, or worse causing an accident with toppling pallets.

---

*We understand cheese maturation is an art and we would be delighted to speak to you about your requirements. We have tried and tested these pouches and can provide UK testimonies of their quality.*

---

## FORM, FILL & SEAL BAGS

Form fill and seal is a growing operation within UK cheese pack-houses. We have the knowledge and support manufacturers to supply the right film for the right application. Problem solving is a speciality.

### PA / PE

Polyamide / polyethylene available in a number of gauge configurations and in clear, blue tint or custom printed as required.

### PP / PA / PE

Polypropylene / polyamide / polyethylene  
This is a major advancement on standard PA / PE. The thin polypropylene coating, takes away the water vapour absorbency and dispersal from the polyamide (nylon) content of the film. Taking away the curl factors and water crystallisation in cold conditions and giving an easy to use high barrier film. Available in configurations as above.

### PET / ALox / PE

Polyester / aluminium oxide / polyethylene  
Crisp feel, high clarity, very high barrier modern material. Very easy to work with to gain high quality packs. Available in a number of gauge options and clear, tinted or fully print service available.

*All of the above are available slit to size, on roll lengths and cores size to suit your requirements perforating and centre-folding is also available if required.*

*We love nothing more than solving your problems, if we can then you don't forget us. If you have an issue with any substrates and could use some independent help. We would be delighted to be of service.*

## ADDITIONAL PRODUCTION PACKAGING & AIDS

In order to offer the full 'one stop shop' operation, we have gradually added various products that customers have requested. This is work in progress and we continue to grow the products in this area.

### Board Interleaves

Interleaves in corrugated or, in some cases, solid board are available and have been supplied to use waxing on as well as pallet interleaves. All sizes and gauge of board can be sourced.

### Film Interleaves

Film interleaves cover a variety of products, from film discs that some customers used to stand maturing cheese on, to 1000 x 1200 sheets on a roll that are used to wax on in some pack houses. Everything is available and most available as perforated to tear from the roll.

### Board Discs

Discs and shaped boards are available to suit requirements, in solid board, coated boards and corrugated as required. All from BRC approved source.

### Waxed Paper Discs

This was asked for as a solution to marked cheese from conveyors during waxing and we solved this by providing thin gauge waxed paper discs that are applied prior to waxing. Various sizes available and tooling is not charged for if you need a custom size, as long as minimum volumes are met.
